

SYSTEM REQUIREMENTS

- ▶ Windows® XP/Vista/7
- ▶ .NET Framework 3.5
- ▶ 1MB disc space
- ▶ Caller ID
- ▶ Code Blue ToolVox® Media Gateway

EVENT MANAGEMENT SYSTEM (EMS) SOFTWARE

Blue Alert **EMS (Event Management System)** from Code Blue handles all incoming emergency and non-emergency events with an easy to use Graphical User Interface (GUI).

Effectively utilize **EMS** for remote operation of Code Blue emergency communication devices. Open gates and AED access doors, turn the LED beacon/strobe on or off, transfer calls to the Public Address System (PAS) to make area wide announcements and incorporate other ancillary devices and applications. Have a camera connected to your Code Blue unit or one mounted nearby? Simply integrate **EMS** with your CCTV system for instant video when your Code Blue units are activated.

The **Event Management System** utilizes an advanced API for efficient integration with third party applications.

STANDARD FEATURES

- ▶ Popup screens for all incoming messages
